

# PRODUCT OVERVIEW

## Kodak Capture Software - Full Version

**Kodak** Capture Software

*Kodak Capture Software* is an easy-to-install, easy-to-use production scanning application for electronic capture of documents from *Kodak* Scanners. It is an ideal front-end capture application for Enterprise Content Management (ECM) and business process management applications. Capture Software is also ideal for imaging, forms processing and workflow applications, and as a standalone application. It manages scanning, indexing and batching- simplex and duplex, color, bi-tonal and grayscale. Batches can be easily exported to many popular applications, such as scan-to-Web, online storage or archival storage with *Kodak* i9600 Series Writers, CD authoring or any ECM application, complete with associated index data. Capture Software allows you to fully utilize your *Kodak* Scanner's capabilities for maximum productivity. All functions are performed in software; no special hardware acceleration is required.

*Kodak Capture Software* is designed for speed, accuracy, and ease-of-use. It enables optimum scanner throughput and maximum operator productivity. A high-speed multi-page display presents images deskewed and auto-cropped for legibility. A complete set of icon-based tools is available to simplify scanning management.

The full version of *Kodak Capture Software* requires installation of a hardware key that comes with the purchased software. In addition to harnessing the unique capabilities of their respective *Kodak* equipment, Capture Software has different suggested list prices depending on the *Kodak* Scanner model, making the turnkey application affordable to both the Reseller and the end user.

## Kodak Capture Software Lite

*Kodak Capture Software Lite* (only for i1200/i1300/i100/i200 Series Scanners and i30/i40/i55/i65 Scanners) is a production scanning application, with limited functionality that is sufficient for use as a departmental application with your *Kodak* Scanner.

Capture Software *Lite* allows scanning, viewing, and storing in standard Batch Output Formats (e.g., Single-page TIFF, Multi-page TIFF, PDF). In addition, all features of the *Kodak* Scanners are supported. No hardware key is required.

To get full functionality software, you can upgrade from Capture Software *Lite* to the full version of Capture Software. See the "Catalog Numbers" section on the Capture Software website ([www.kodak.com/go/capturesoftware](http://www.kodak.com/go/capturesoftware)) for more information. When you upgrade to the full version of Capture Software, you will receive additional features and functionality.

NOTE: The full features of Capture Software can be demonstrated without a hardware key by switching to Demo mode.

## Feature Comparison – Lite vs. Full

Feature	Full	Lite
Supports all features of the <i>Kodak</i> Scanners	■	■
A graphical user interface (GUI) optimized for ease-of-use	■	■
Keyboard shortcuts for improved productivity	■	■
Multi-image display (1, 2, 4, and 8 images can be displayed simultaneously) with dynamic zooming for fast and easy verification	■	■
Fast display in scale-to-gray of bi-tonal (i.e., black and white images)	■	■
Web publishing via PDF output	■	■
PDF generation of color and bi-tonal images with editable and searchable text through a third party application*	■	10 pages per batch limit
Scan to E-mail includes automatic splitting of large documents into multiple emails	■	
International language support including Japanese and Simplified Chinese	■	■
Simultaneous color and bi-tonal output from color scanners	■	■
Image manipulation and editing lets you rescan, rotate, reorder and delete pages	■	Insert, Rescan, Move, Split, Crop, Blank are not available
Merge and Split front and rear†	■	
Auto rotation supports landscape scanning to maximize throughput	■	■
Two duplex modes: Classic and Calendar†	■	
Auto Blank Image Deletion during scanning reduces presorting, even on large sets	■	■
Auto crop removes black borders and Deskew straightens images on-the-fly for color and bi-tonal images	■	■
Blank page separation allows separation of batches or documents by simply inserting a blank page or paper	■	■
On-the-fly bar code, OCR zone, MICR OCR and patch code recognition enables powerful indexing and batching of bi-tonal and color images	■	
Index files at the batch and document level	■	Only one index field is allowed
Indexing options to set special default values, split a bar code/OCR value over several fields, and validation through mask formulas and check digit exits	■	Only one index field is allowed
Bar code engine support for 17 types of bar codes (including PDF-417 2-D bar codes)	■	
Drag n' Drop OCR indexing	■	■
Indexing only workstation	■	

\* 50,000-page license bundled with i200, i600, i800 and i1860 full version; 25,000-page license bundled with i100 full version, 10,000-page license bundled with /i55/i65/i1300 full version; 5,000-page license bundled with i30/i40/i1200 full version.

† Supported only in bi-tonal scanning.

Feature	Full	Lite
Automatic batch and document separation input from patch and bar codes	■	
Software patch code reader reads Type 2, Type 3, and Type T patch codes. Separation level and deletion or saving of the image containing the patch code can be configured per patch code type	■	
User profiles and profile groups control access to specific applications and Capture Software features and capabilities	■	
Array of Batch Output Formats for integrating scanning into content management, document management, workflow and imaging applications	■	Not all Batch Output Formats are available
A special Batch Output Format for CD authoring with full indexing information and retrieval/viewing application (CDVue – bi-tonal image support only)	■	■
A special Batch Output Format for CD authoring with full indexing information and retrieval/viewing application (Find and View – color and bi-tonal image support)	■	
Digital Signature and Image Verification service to ensure that scanned images have not been altered	■	

## Capture Software operating modes

The following modes can be run when installing the software from the Capture Software CD:

- Capture Software full version (full enablement requires installation of a hardware key that comes with the purchased software).
- Capture Software *Lite* (only for i1200/i1300/i100/i200 Series Scanners and i30/i40/i55/i65 Scanners) — a limited functionality version that is sufficient for use as a departmental application with your *Kodak* Scanner.
- Demo — allows you to demonstrate all the features and capabilities of the full version of software. However, 10% of the scanned images are stamped with a “Demo” bitmap. All Capture Software CDs contain demo applications which are already set up and ready to use for demonstrating purposes with a *Kodak* Scanner attached to your system.

NOTE: The latest Capture Software Demo and *Lite* versions are available for downloading from the Capture Software public web page at [www.kodak.com/go/capturesoftware](http://www.kodak.com/go/capturesoftware).

- Emulation — emulation mode allows you to demonstrate Capture Software without a *Kodak* Scanner attached to your system.
